Queue- Management Kiosk

Pushpam has developed a kiosk for the Q management system, the kiosk is having 15" LCD monitor with touch screen and thermal printer. Thermal printer used is an 80 mm width 220 mm per second high speed printer with cutter. This Printer can accept the paper of 60 mm and 80 mm both, as per customer need. The paper is used is a thermal paper which is used for printing the token for the customer. The PC used here inside is a Celeron or a P4 CPU with standard features like 512 MB RAM, 80 GB HDD etc. This Kiosk can be connected in the network to manage the tokens along with the token tellers. All the token tellers and kiosk can access the central data on the server and handle the queue properly. Design is done really in neat way and shape is elegant so that it can be accepted easily in any kind of interior of the customer. This kiosk is available in the Fiber Glass (FRP) or in metal. Any option for the color as per the customer requirement is possible and we can provide customers logos on the Kiosk. Main application of this kiosk is in the financial institutes, personal call centers, Banks, Doctors, Hospitals, parking lots, booking places etc. We have created couple of models for this; please find attached one for your reference. We also have a model which is a wall mounted model where any one even doesn't need to have the floor space to keep the kiosk. Our professional software partners can even provide you the customized software application required for this solution, or they can integrate this solution along with your current system. If you need any more information in this regards kindly contact.....
