Transaction kiosk in a stand model

Pushpam has developed a Transaction Kiosk for the ticketing system and was deployed for a rail ticketing by one of the customers of company. This machine is using a CRT monitor of 17" with the touch screen. Customer can use the touch screen for the various options selection and do the necessary ticketing. The printout of the tickets are done through the Dot Matrix printer. We have fixed the printer in such a way that it can be handled easily and one can change the paper easily. The payment from the customer is done with the help of the magnetic card, which is a membership pre paid card. Customer can pay from this card for which there is a swappable magnetic card reader inside the machine, which is fitted next to the monitor in the system. The configuration of the machine includes a P4

CPU with the 512 MB RAM, 80 GB HDD and standard ports. The most beauty of the machine is its integration of the printer and the magnetic card reader inside. The standard machine includes all the ports like USB port, Serial Port, Parallel Port, Sound port, Network Port (RJ45), Modem Port (RJ11). All standard interface makes it possible to have the complete expandability of the machine in all terms. If you need any more information on this product please contact.....
