Video Conferencing Kiosk

Pushpam has developed a kiosk for its customer which is used for video conferencing application. The kiosk incorporates 32" Plasma Display along with the IP phone, keyboard, Magnetic Card reader, USB camera, Speakers, UPS and PC. The main application of this solution is Remote Call Center. Any customer taking service from any where like Public place can take a service at the same time he can see the person offering him the service as well as person offering the service at the remote location can see the customer taking the service. The IP phone provides good bandwidth to have smooth level of the video conferencing. By using the keyboard and mouse customer can easily operate the kiosk like a regular desktop machine. 32" bigger display gives a real perfect look at the kiosk, as well as in the ideal time the same kiosk can be used for displaying various advertisements and promotional material. Magnetic card reader allows customer to pay easily through the credit card. The kiosk is designed to have proper air circulation and can maintain the temperature properly. There are various devices like Router, modem and switch inside the kiosk. Kiosk is also having a space created to keep the UPS with the 3 batteries to make it have backup of 2 hrs in case of the power failure. Design created is a completely neat and elegant. Kiosk is made completely in the Metal and Stainless steel body. For further more details on this kindly contact.....
